Siddons – a true blue heritage built on plain good sense

“ We have had our 327 litre Siddons Solarstream installed for over a year now and we are very happy with it. We have the Solarstream connected to Offpeak 2 power, and the energy bills are really low.”

Terry, NSW

“ After doing a lot of research decided on a Siddons. The fact that it can be run off-peak and at such a wide temperature range was really the deciding factor for me. We never have to think about our hot water anymore. It's just there whenever we need it. I don't think you can ask for more than that from your hot water system.”

Bob, Perth WA

“ My 264 litre Siddons was installed in Dec. 08 and has performed faultlessly, and has reduced hot water costs by at least 50%. After Cyclone Yasi, I was able to run my system using only a generator for 14 days while we were without mains supply. The system ran until thermal cut out (about two hours). This was sufficient to supply hot water for the house of two adults and kitchen domestics for three days.”
